New Jersey 2020 Strategic Highway Safety Plan

Driving Toward ZERO Deaths
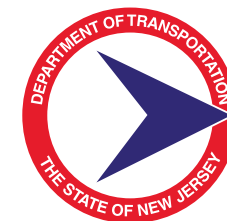

Safety Summit 2

Tuesday, January 21, 2020

8:00 AM - 3:30 PM
Brower Student Center,
The College of New Jersey

Agenda

The morning breakout session will include separate discussions for each of the six emphasis areas. The afternoon breakout session will repeat the discussions for the same six emphasis areas. Each attendee will participate in two of their top three Emphasis Area preferences. Preferences were submitted at the time of event registration.

Emphasis Area Teams and Leaders

Lane Departure

Vince Cardone
Principal Engineer II, Traffic, Monmouth County

Lane-departure crashes occur when a vehicle crosses an edge line or center line and collides with a fixed object or other vehicles.

Mr. Cardone is well-versed in network screening analysis and the use of countermeasures to reduce lane departure crashes. He has led efforts to implement countermeasures at high-crash locations throughout Monmouth County.

Intersections

Kimberly Singleton
Manager, Division of Traffic and Signals, City of Newark

The complications of different approaches, geometry, and crossing movements by motorists, pedestrians, and bicyclists, make at-grade intersections one of the most complex traffic situations that people encounter.

Ms. Singleton's efforts have made the City of Newark a leading user of innovative technology to alleviate traffic and safety concerns at intersections. Before joining the City of Newark, Ms. Singleton was employed with NJDOT working on intersection, and lighting design and construction.

Pedestrians and Bicyclists

Elise Bremer-Nei
Bicycle and Pedestrian Coordinator, NJDOT

Pedestrian and bicyclists are amongst the most vulnerable users on the road. Due to its higher than average incidence of pedestrian crashes, New Jersey is a Pedestrian Focus State.

Ms. Bremer-Nei's experience and passion for pedestrian and bicycle safety make her a strong subject matter expert. She is a licensed planner and a member of the Association of Pedestrian and Bicycle Professionals.

Data

Layla Fryc
Traffic Engineer, NJ Turnpike Authority

Crash data collection, management, and analysis is critical to understanding safety issues and how to best align safety-related investments.

Ms. Fryc administers the Data Resources Program in the Operations Department of the NJ Turnpike Authority. She has extensive experience in crash and traffic-data analyses. Ms. Fryc also serves as a member of the State Traffic Records Coordinating Committee.

Driver Behavior

Tracy Noble
Manager, Public and Government Affairs, AAA

This emphasis area includes drowsy drivers, distracted drivers, aggressive drivers, impaired drivers and unbelted drivers and occupants.

Ms. Noble is actively involved in highway safety and serves on the New Jersey State Traffic Records Coordinating Committee. Ms. Noble's experience at AAA allows her to bring a road user's perspective to the discussion.

Other Vulnerable Road Users

Arnold "Andy" Anderson
Community Traffic Safety Program Coordinator, NJ Bike and Walk Coalition

This emphasis area includes road users that experience elevated risk of bodily harm including motorcyclists, road workers, mature drivers, younger drivers, and emergency response.

Detective Anderson was formerly the Coordinator of the Essex County College Police Academy Community Traffic Safety Program. He is a member of the Governor's Teen Driver Study Commission and currently leads the Teen Safe Driving Coalition of New Jersey.
